PROFESSIONAL SUMMARY

Backend & Applied ML Engineer with experience in building **scalable data platforms, high-throughput ETL systems, and GenAI-powered enterprise solutions** on Azure. Strong in **distributed processing, embeddings-based systems, and performance optimization**, with proven ability to take ambiguous business problems to production-grade systems.

EXPERIENCE

Associate Consultant

Emergys | Pune, India

May 2025 – Present

- Architected an agentic RAG chatbot for querying internal business logic and financial models using code embeddings + FAISS + LLMs, enabling context-aware reasoning over complex systems.
 - Designed a multi-agent routing architecture to dynamically direct queries to domain-specific agents, improving modularity and response relevance.
 - Implemented LLM guardrails and multi-turn memory, ensuring reliability in logic-heavy enterprise queries.
 - Built a high-performance Excel export API with async streaming and disk-based writes, supporting ~1M rows in 15–20 mins on 7GB infra while handling concurrent downloads.
 - Designed and developed a pluggable Data Connector API framework using Java and Spring Boot, enabling connectivity to varying data sources like Microsoft Fabric SQL Analytics, Azure Data Lake Storage, PostgreSQL, and other structured and unstructured data sources for metadata extraction, data governance, and dynamic business-rule-driven data analysis.
-

Senior Software Engineer

Ellicium Solutions (Emergys) | Pune, India

Jul 2024 – Sep 2025

- Built an end-to-end ETL pipeline (Python, FastAPI, Azure) to convert user-uploaded Excel/CSV files into application-specific templates, supporting multi-sheet inputs, column selection, and handling noisy/irrelevant data.
 - Implemented dynamic transformation logic including programmatic column mapping, text cleaning, date standardization, geographic normalization to ISO formats, and many-to-many currency conversion based on transaction date.
 - Provided financial impact summarization of the transformations on the client data.
- Built vendor intelligence systems:
 - Normalization: Sentence Transformers + clustering + LLM validation (~95% accuracy on 10K vendors in ~17 mins)
 - Classification: Azure AI Agents + Bing grounding (~88% accuracy on 10K vendors)

- Developed automated PowerPoint generation pipelines (Azure Functions + python-pptx) for procurement and spend analytics, delivering real-time business insights and revenue-critical outputs.

Software Engineering Intern

Ellicium Solutions | Pune, India

Jan 2024 – Jun 2024

- Built news aggregation pipeline scraping data from multiple sources (web scraped data from Bing, Google, Yahoo) using Python.
- Developed BERT-based NER model for domain-specific entity extraction (PoC).

Software Development Intern

Equations Work

Aug 2023 – Jun 2024

- Built an end-to-end traffic violation reporting system (Android + Flask backend).
- Integrated YOLOv8 + EasyOCR pipeline for automatic number plate detection and extraction.
- Designed workflow for real-time violation reporting to authorities and social platforms. Enabled scalable, user-driven reporting to improve traffic compliance awareness.

PUBLICATIONS

Violation Eye – AI-Based Traffic Violation Reporting System

IEEE | July 2025

- Designed AI-powered system combining **computer vision, OCR, and real-time processing** for traffic violation detection and reporting. This was part of the internship with Equations Work.

SKILLS

Languages: Python (Flask, FastAPI), Java (Spring Boot)

NLP / GenAI: BERT, Sentence Transformers, Embeddings, NER, RAG, Vectors, Agentic AI, Prompt Engineering, Azure OpenAI

Cloud / Systems: Azure, Databricks, Git, Spark/PySpark

Databases: MySQL, SQL Server, Oracle, MongoDB, Firebase

EDUCATION

B.E. Computer Engineering

MMCOE, Pune | 2021 – 2024

CGPA: 9.25

Diploma in Computer Engineering

Government Polytechnic, Pune | 2018 – 2021

Percentage: 93.67
